Thin-walled stainless steel pipe for fluid transfer--Sanitary water supply pipe

Thin wall stainless steel water pipe is a new type of pipe that came out in the late 1990s. It has a strong development momentum because of its safety and health, high strength, good corrosion resistance, firmness, long service life, maintenance free, beautiful and other characteristics. It has been widely used in building water supply and direct drinking water pipes.

With the development of national economy and the improvement of people's living standards, thin-walled stainless steel pipes and stainless steel fittings have become the new trend of the development of domestic water supply pipeline system and one of the most promising new pipes.

Widely used: **Pharmaceutical, food, municipal drinking water**
